

- ① Empirical Rule
- ② Z-score

Mean = 55k
SD = 5k

Salary of 10k people
↓
548 people

$$Z\text{-score} = \frac{\text{Data} - \text{Mean}}{SD}$$

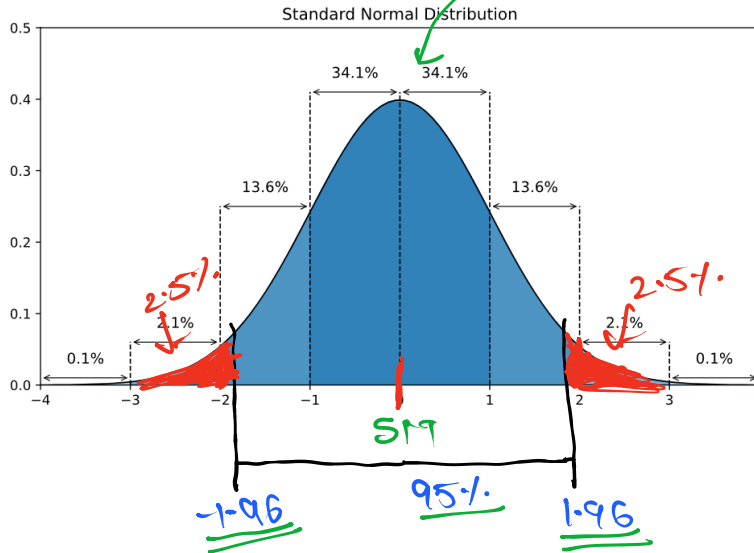

$$= \frac{47k - 55k}{5k}$$

$$Z(9+1) = \frac{111 - 100}{5k}$$

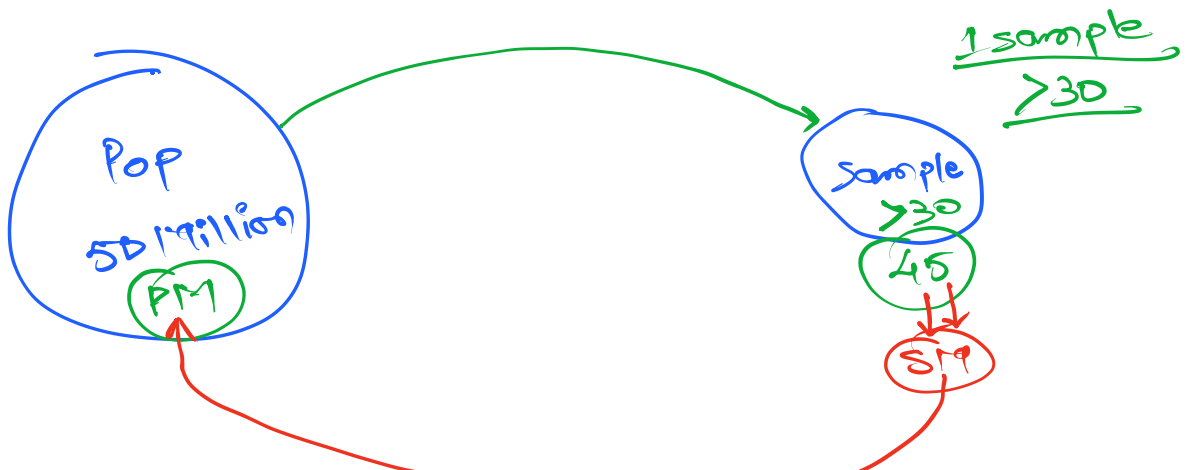

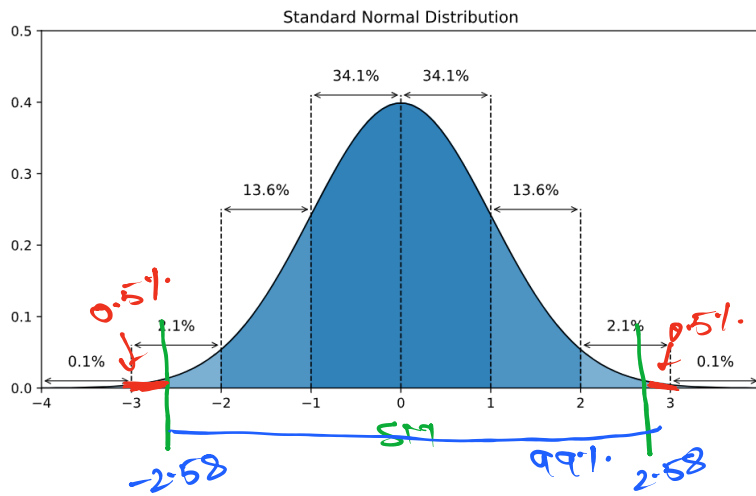

$$= -1.6$$
